APPETIZERS

Appetizers stimulate the imagination, whet the taste buds, and pique the appetite. They should satisfy without filling, and complement rather than dominate the occasion, whether it be a casual afternoon pool party or a starched-and-pressed formal dinner. Because appetizers are a preview, they must be chosen, prepared, and served with distinctiveness and flair.

What better ingredient for really inspired appetizers than seafood? Light in texture, delicate in flavor, and perfect for combination in so many tantalizing recipes, seafood should be a staple in every cook's ingredient pantry. Fish and shellfish are quick and easy to prepare and almost tailor-made for many finger food suggestions. Some, such as oysters and clams, come from the water ready to eat in individual portions.

Seafood can be served alone as either hot or cold appetizer fare, or blended in dips, stuffings, fondues, pastry, and other combination dishes. Few other ingredients boast such versatility: when one particular variety is unavailable or outside budgetary limits, other seafood species can usually be substituted with excellent results. This flexibility poses almost unlimited opportunity to alter one basic recipe using different seafoods and achieving a new twist each time. Most seafood appetizers can be prepared well in advance and finished with simplicity and confidence at the last minute.

The appetizer section of this cookbook is a true seafood sampler featuring innovative ideas from Maryland's finest restaurants. Each recipe reflects the unique personality of its contributor and the atmosphere characterizing the restaurant's locality.

Some are entirely novel creations, while others are ingenious variations on old familiar themes. All

are time-tested and heartily approved by discriminating patrons, and then carefully retested in the Seafood Marketing Authority test kitchen to assure success in your kitchen. And every recipe reaffirms the virtues of incomparable Maryland seafood.

Although the difference between appetizer and hors d' oeurve is not clearly and absolutely defined, hors d' oeurve is generally considered to be a category of appetizer appropriate for service away from the table (cocktail parties, social hours, teas, etc.) Some of the recipes in this section are ideally suited to this special need; others are better adapted to table service.

For a different and delicious brunch or supper, try offering an attractive buffet of appetizers with crisp salad, crusty bread, assorted desserts, and hot or cold beverages. Guests will delight in tasting a little of everything without having too much of anything.

Choose from a veritable treasure trove of appetizer ideas—Oysters Salisbury, Baked Stuffed Mushrooms, Clams a la Tonia, Crab Dip Margaret, and countless other delectable tidbits. Any meal introduced by appetizers becomes an occasion-what better prelude to a memorable occasion than seafood appetizers?

Crabs

The crab native to Maryland is the Blue or Blue Channel, named for the blue on the claw. These crabs are sold: live; steamed in the shell; fresh and Pasteurized cooked meat.

Live and steamed crabs average in size from 5" to 6" and are graded and sold as number 1's (prime) and number 2's (medium) according to size. They are sold by the dozen and by the bushel. A 6-ounce steamed crab in the shell will yield approximately 3-ounces of picked meat.

Fresh and Pasteurized cooked meat is sold in 8-ounce, 12-ounce and 1-pound cans in fish markets and in most supermarkets. If the supermarket does not have a fresh seafood counter, the crabmeat is usually kept on ice in a section of the meat counter. All Maryland crabmeat must be kept under refrigeration. The following types of crabmeat are processed in Maryland:

Backfin: meat consists of whole pieces of white meat from the large body muscles that operate the swimming legs of the crab.

Regular: meat consists of small bits of whole meat from the body.

Special: meat consists of a mixture of backfin and regular.

Claw: consists of the brownish-tinted meat from the claws.

Cocktail Crab Claws: (crab fingers) are the large outer claws of the crab with the shell partially removed. They are generally sold in 12-ounce cans, fresh or Pasteurized.

Shelf-life of fresh steamed crabs and cooked fresh crabmeat is 3 to 5 days under constant refrigeration. Shelf-life of Pasteurized crabmeat is 6 months or longer when kept under refrigeration. See special note on Pasteurized Crabmeat below.

One cup cooked crabmeat equals approximately 5.7 ounces; 1 pound crabmeat yields approximately 3 cups.

To freeze crabmeat, see section on Freezing Shellfish page 35.

Soft shell crabs are molting blue crabs taken just after they have shed their hard shells and before new shells have formed.

Soft crabs are sold live and frozen. Live crabs should be cleaned and used within a few hours or frozen. To freeze soft shell crabs see section on Freezing Shellfish page 35. Cleaned Frozen crabs can be found in the freezer section of your fish market or chain store.

Soft crabs are sold in the following sizes: Jumbo, Prime, Medium and Small.

Pasteurized crabmeat is a special method of subjecting fresh crabmeat to a special heat process that prevents spoilage.

By pasteurization and hermetically sealing in cans, you can have a supply of fresh crabmeat on hand at all times.

As long as the can remains sealed, the pasteurized crabmeat will keep in the fresh state 6 months to a year under the proper conditions, refrigerated at 33°-35°F.

However, once the can is opened, the same conditions apply as that existing in freshly picked meat; and the product is then subject to the same spoilage condition. Therefore, use the crabmeat within 3 days of opening the can.

NOTE: DO NOT FREEZE PASTEURIZED CRABMEAT. Flavor and texture will be greatly impaired.

Under NO circumstances should live and steamed crabs ever be stored in such a manner that they could come into contact with each other.

Keep cooked crabs separate from live crabs to prevent contamination by bacteria normally found on raw food products.

Lobster

Northern Lobster which is found in Maryland off the coast of Ocean City is the same species of lobster that is caught from Maryland to Canada. Lobster is a comparatively new industry in Maryland and mostly all of the product is consumed locally in Ocean City.

Maryland Lobsters are available live and steamed in the shell. In other areas of the State, live lobster and fresh and frozen cooked lobster meat is available. These products are harvested, packed and shipped from other areas such as New England and can be purchased from fish markets and some chain stores.

To freeze lobsters see section on Freezing Shellfish page 35.

To clean a boiled lobster to obtain meat for immediate eating or for use in other dishes, see illustration, page 30.

CORAL & TOMALLEY: The green material found in the body of most lobsters is the tomalley (or liver). The red material is coral (or roe), and is found in female lobsters only.

A 2-pound live lobster will yield about ½ pound (8 ounces), cooked meat. A 1 to 1¼-pound lobster will yield about 3 to 4 ounces cooked meat.

NOTE: Northern Lobster is not to be confused with "lobster tail", which is a crayfish and is an entirely different species of shellfish.

Broiled Lobster-Ocean City's Finest

Live lobster(s), allow about 1 pound of lobster in shell, per person; Water; Salt, 2 tablespoons for each quart of water.

Fill large pot with sufficient water to cover lobster(s). Add salt and bring to rapid boil.

Grasp lobster firmly just behind the claws and plunge, headfirst, into boiling water. Allow water to boil again after putting in each lobster. Lower heat, cover pot and simmer 15 minutes for 1-pound lobster(s), 20 minutes for 1½ to 2-pound lobsters(s), 40 minutes for very large lobster(s).

Remove lobster(s) from pot, split and serve hot with melted butter, or chill whole and serve cold with mayonnaise.

NOTES: A 2-pound live lobster will yield about ½ pound (8 ounces) cooked meat. A 1 to 1¼-pound lobster will yield about 3 to 4 ounces cooked meat.

To clean a boiled lobster to obtain meat for immediate eating or for use in other dishes, see illustration, page

TO CLEAN A BOILED LOBSTER TO OBTAIN MEAT AND ALSO RETAIN SHELL FOR USE IN LOBSTER THERMIDOR, BAKED STUFFED LOBSTER AND OTHER DISHES:

Remove all lobster claws and flippers. Reserve the two large claws. Using a heavy knife, with sharp point, cut through the entire length of the lobster body and tail. Spread open and remove the meat, discarding the black line which runs the entire length. The green material is tomalley or liver; the red material is coral or roe; both of these are edible. Discard all other parts. Clean the two sections of the lobster body shell and reserve. Using a blunt instrument, such as a crab mallet, break open the large claws and remove the meat.

Lobster Thermidor

3 (2-pound) live lobsters
2 cups heavy cream
¼ cup (½ stick) butter or margarine
3 tablespoons flour
½ teaspoon salt
1 cup milk
¼ cup prepared mustard
½ cup grated Parmesan cheese
2 tablespoons butter or margarine

Boil and split lobsters (see page 26). Remove lobster meat from shells and cut into bite-size pieces. Save coral, if any is present.**

Put cream in 1-quart *heavy* saucepan and simmer over low heat for about 30 minutes, stirring occasionally.

In 2-quart saucepan, melt butter. Stir in flour and salt. Slowly add milk and cook, stirring constantly, until mixture comes to a boil and thickens. Remove from heat and mix in cream and lobster coral, if any.

Brush inside of lobster shells lightly with mustard. Divide lobster meat among the 6 shells (about ¾ cup per shell). Pour sauce, about ⅞ cup per shell, over the meat. Sprinkle each shell with about 4 teaspoons cheese and dot each shell with 1 teaspoon butter.

Bake in hot oven (400°F.), until hot and bubbly, about 10 minutes.

Serves 6.

NOTE: 1½ pounds cooked lobster meat may be substituted in above recipe. Use individual baking shells or ramekins for cooking mixture.

**Coral (or roe) is the red material found in the body of female lobsters only. Thus it may, or may not be available. The green material is the tomalley (or liver) and is usually found in all lobsters. Both are considered delicacies and may be used either separately or together in the above recipe.

MARYLAND

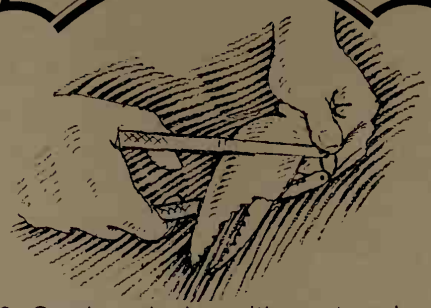
HOW TO ENJOY MARYLAND LOBSTER

1. Twist off the claws.

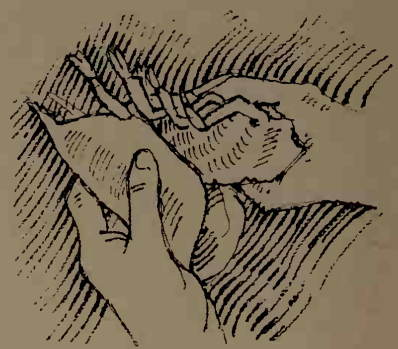


2. Crack each claw with a nutcracker, pliers, knife, hammer, rock or what have you.

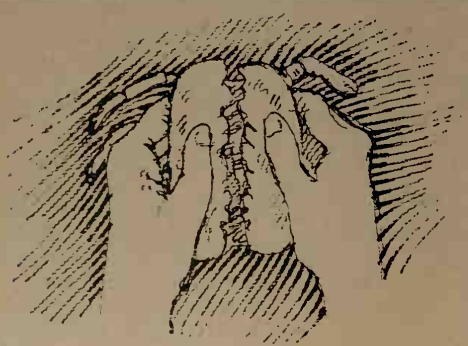
3. Separate the tail-piece from the body by arching the back until it cracks.

4. Bend back and break the flippers off the tail-piece.

5. Insert a fork where the flippers broke off and push.



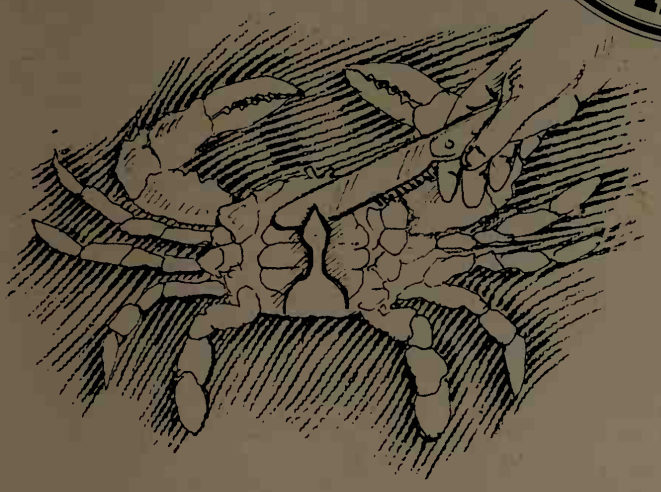
6. Unhinge the back from the body. Don't forget that this contains the "tomalley", or liver of the lobster which turns green when it is cooked and which many persons consider the best eating of all.



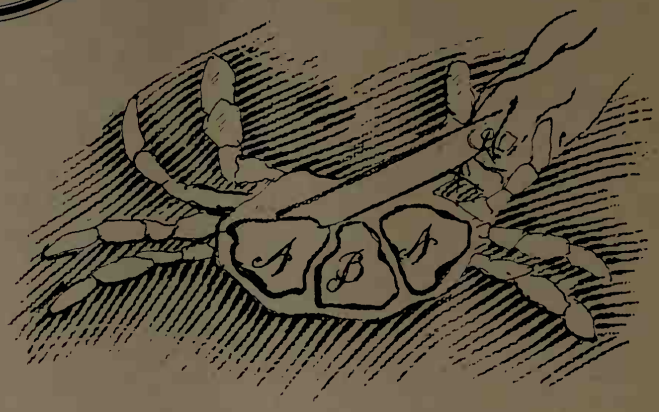
7. Open the remaining part of the body by cracking apart sideways. There is some good meat in this section.

8. The small claws are excellent eating and may be placed in the mouth and the meat sucked out like sipping cider with a straw.

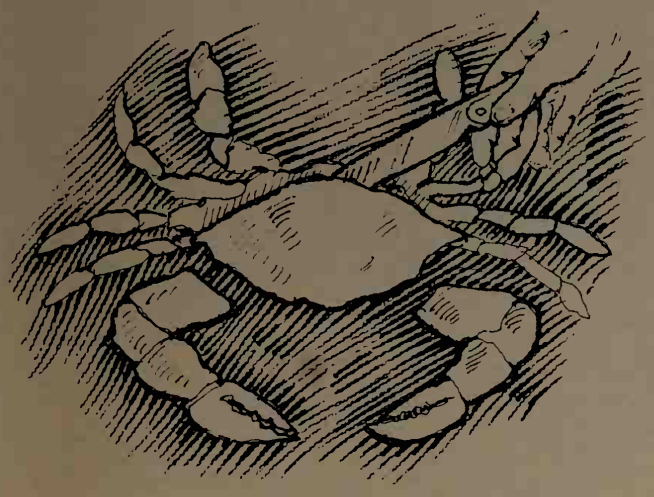
HOW TO ENJOY MARYLAND STEAMED CRABS



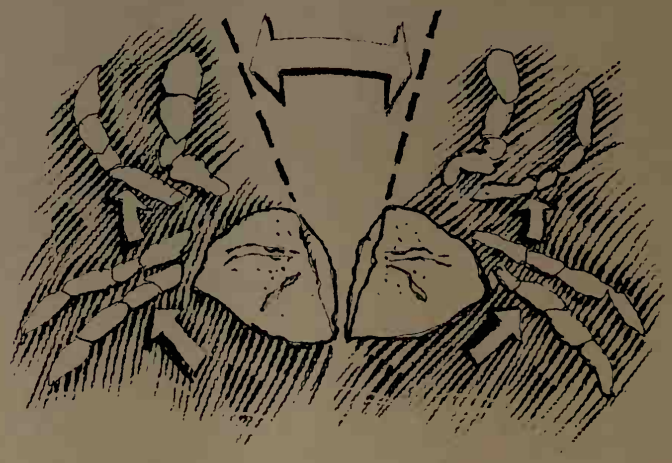
STEP 1 With thumb or knife point, pry off apron flap underside and discard it.



STEP 3 With knife edge scrape off and discard Areas A & B. This exposes hard semi-transparent membrane covering edible crab meat.



STEP 2 With thumb or knife point, lift off top shell and discard it. Break off toothed claws and set aside for eating later.

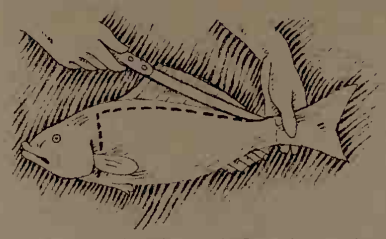


STEP 4 Hold the crab at each side and break it apart at the center. Discard appendages.

STEP 5 Meat under membrane cover in each half of crab can be exposed by removing this cover with knife OR you may slice lengthwise through the center of each half without removing the membrane. Each method will expose large succulent chunks of meat, which may be removed with fingers or knife. Crack large claws with mallet or knife handle to expose meat within.

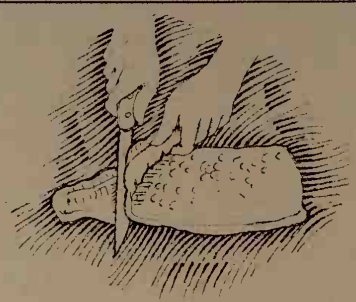
THREE EASY STEPS FOR FILLETING

Budget minded folks can cut costs by filleting their own fish. A cleaned but not boned fish is a good buy and will produce a delectable and economical dinner in a few minutes. All that is needed is a sharp filleting knife and a cutting board.



Place the fish on the cutting board. Cut down the back of the fish from tail to head. Then cut just behind the gills down to the back bone.

Holding the knife at slight angle against the bone, cut with sliding motion along the bone pulling back the fillet with the other hand until the flesh is removed down to the tail. Turn the fish over and repeat the cutting process for the other fillet.



To skin, place fillet skin side down on cutting board. Starting from tail (narrow) end, cut flesh to skin (but not through skin) and, holding knife at an almost flat angle against skin, cut and slide the blade under the flesh toward the wide end.

HOW TO SHUCK CLAMS

Care of clams after digging

Wash off all surface sand with sea water. Cover clams with clean sea water or 2-percent brine (⅓ cup salt to 1 gallon of tap water) and let stand for 15 or 20 minutes to allow the clams to cleanse themselves of sand—salt water is necessary if the clams are to open and discharge sand. The sand will settle to the bottom of the container. Change the water and let stand a little while two or three times. This step is important if the clams are to be steamed or eaten from the shell.

Inserting knife

Cutting clam from shell

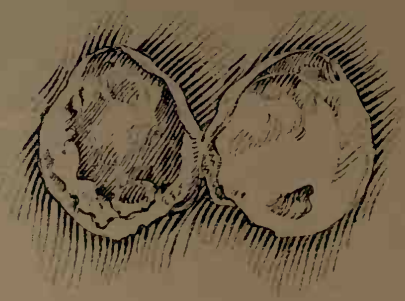
Shucking hard clams

Wash the shell clams thoroughly, discarding any broken-shell or dead clams. To open a hard clam, hold it in the palm of one hand with the shell's hinge against the palm. Insert a slender, strong, sharp knife between the halves of the shell and cut around the clam, twisting the knife slightly to pry open the shell. Cut both muscles free from the two halves of the shell. If to be served on the half shell, remove only one-half of the shell. If to be used in one of the other recipes, remove and rinse the meat.

Since soft clams and surf clams do not have tight-fitting shells, they are easier to open.

An alternate method is to place the shell clams, after washing, in a small quantity of boiling water. Cover and steam them 5 to 10 minutes, or until they are partially open. Drain, remove, and wash the meat from the shells.

Cutting muscle



Clam on the half shell

HOW TO SHUCK OYSTERS

Wash and rinse the oysters thoroughly in cold water. Open or shuck an oyster by placing it on a table flat shell up and holding it with the left hand. With the right hand force an oyster knife between the shells at or near the thin end. (Figure 3). To make it easier to insert the knife, the thin end or "bill" may be broken off with a hammer - a method preferred by some cooks. (Figure 2). Now cut the large adductor muscle close to the flat upper shell in which it is attached and remove the shell. (Figure 4). Cut the lower end of the same muscle, which is attached to the deep half of the shell (Figure 5), and leave the oyster loose in the shell if it is to be served on the half shell, or drop it into a container.

After shucking, examine the oysters for bits of shell, paying particular attention to the muscle, to which pieces of shell sometimes adhere.

Instead of shucking by hand a commercial mechanical oyster shucker may be used if available.

FREEZING SHELLFISH

Shellfish, including crabs, clams, oysters and lobster, constitute a most delicate and perishable group of foods. Once removed from the water, they should be kept under refrigeration and ALIVE until cooked or prepared for the freezer.

Crabs—Hardshell-Blue Crabs

Steam or boil crabs. Pick meat from the body and claws, separating the backfin or lump meat from the smaller pieces — called regular or flake meat — and the claw meat.

When frozen, crabmeat gets tough, watery and loses flavor. If you freeze crabmeat, a better product is achieved by making it into a prepared dish prior to freezing; i.e., crab cakes, crab imperial, etc. Finished products generally have better quality and flavor if frozen uncooked. Allow extra time for cooking a frozen dish. Always thaw in the refrigerator rather than at room temperature before heating or frying.

Package frozen crabmeat products with moisture, vapor-proof wrapping or in rigid plastic containers.

Storage time at 0° F: Cooked — three months; Raw — six months.

Freezing crabs in the shell, is not recommended.

Soft Shell Crabs—How to Dress Soft Shell Crabs

Crabs should be alive when dressed. Cut off the face just back of the eyes. Remove the apron; remove the spongy parts (the gills, stomach, and intestines) under the points of the body covering. Rinse in cold water, and drain to dry off excess moisture. Crab is now totally edible.

Cook and eat immediately or freeze. Wrap crabs individually in plastic film. Wrapped crabs may then be placed in a freezer-poly bag or wrapped with aluminum foil or moisture vapor-proof paper. Exhaust as much air as possible, seal and label.

Thawing

Thaw soft shell crabs in the refrigerator. Do not defrost under cold, running water, as this method will cause claws to fall off. Thaw before breading or coating, then cook.

Storage time at 0° F; Cooked — three months; Raw — six months.

Clams

The shells of all kinds of clams should be tightly closed, or, if open slightly, should close tight when touched, indicating the clam is ALIVE.

Soft Shell Clams

Soft shell clams should only be frozen in the shell. Once frozen, they are usable only as steamed clams. No successful method of freezing shucked soft shells has been perfected — the shelf life of fresh shucked clams is just five days.

To Freeze Shucked Breaded Soft Shell Clams

Shuck, remove snoot, and sand ring with a knife or shears.

Clams must be prepared for freezing by breading and blanching.

Coat drained clams with a dry mix, such as pancake mix.

Blanch by cooking coated clams in hot oil at 350° F. for one minute. Drain on absorbent paper.

Arrange blanched clams on a shallow tray, place in freezer until clams are stiff, but just frozen. Put frozen clams in poly-freezer bag, exhaust air, seal, label and store.

Frozen breaded clams must be cooked while still frozen.

Storage time at 0° F: three to six months.

Hard Clams

Size designation ranging from small to large: Little Neck, Cherry Stone, Chowder or Sea Clams.

Hard shell clams may be frozen alive in the shell and can be steamed from the frozen state, then used in chowders.

Shucked Hard Shell Clams

Shuck clams; strain the liquid to remove any bits of shell. Freeze clams in their own juice. The best way to package shucked clams is in rigid plastic containers, leaving ½-inch head space. Seal, label and freeze. Package only the amount that can be used at one time. Thaw frozen clams in the refrigerator

Freshly shucked hard shell clams have a storage life of 10 to 14 days. Frozen, shucked clams may be stored at 0° F. up to six months.

Oysters

The shelf life of oysters in the shell is the same as hard clams — two to three weeks if stored on ice or at 35° F.

If you must freeze oysters in the shell, put the live oysters in freezer poly-bags, seal and freeze. Storage time at 0° F. is three months.

If you must freeze shucked oysters, shuck live oysters, strain juice to remove bits of shell, and package oysters in their own juice in rigid plastic containers allowing ½-inch head space. Seal, label and freeze. Storage time at 0° F. is six months.

Frozen oysters often turn a pink or red color. This is usually the result of what the oyster has eaten and a combination of weather conditions from hot to cold. Oysters with pink color are considered safe for consumption, raw or cooked.

Freezing oysters, breaded or in other cooked dishes, may result in better quality products than raw frozen oysters in natural juices.

Lobster

Lobster should be treated the same way as hard shell crab if it *must* be frozen. Follow the same guide lines of cooking, removing meat and making it into final end products prior to freezing.

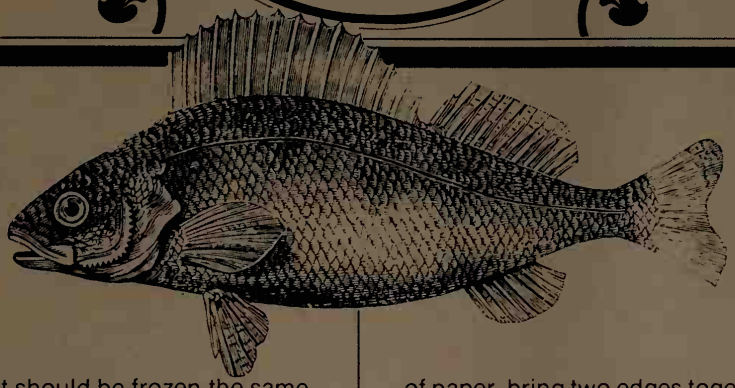
FREEZING FINFISH



Because fish is so perishable, it should be frozen the same day it is caught, if it is to be frozen at all. Fish should never be frozen more than two days after the catch.

Cleaning and Dressing Fish

Wash fish and soak in cold water for a few minutes to allow for easier scaling. Remove scales by scraping gently in the direction from the tail to the head.

Remove the entrails after cutting the entire length of the belly, from vent to the head. Remove the head, including the pectoral fins, by cutting above the collarbone.

If backbone is large, cut down to it on each side of the fish and snap the backbone over the edge of the cutting board or table.

Remove the dorsal, or large back fin by cutting the flesh along each side and pulling the fin out. Never trim the fin off with shears or a knife because the bones at the base of the fin will remain in the fish. Remove the tail and ventral fin.

Wash the fish again thoroughly in cold running water to remove any remaining blood, viscera or membranes. Note: Soaking in salt water is not recommended, as this practice draws flavor juices from the meat.

The fish is now "dressed" or "pan-dressed". Larger fish may be cut cross-wise into steaks about ¾ inches thick or filleted. Steaks and fillets may be dipped in a 5 percent salt solution for 30 seconds before wrapping and freezing for preservation purposes.

Wrapping, Freezing and Storing

"Dressed" or "pan-dressed" fish should be dried, inside and out, to remove excess moisture. Wrap each individual fish in a good quality film wrap.

Place one or more wrapped fish together. Overwrap with moisture, vapor-proof paper. Use enough paper to permit folding edges down at least three times. Place fish in center of paper, bring two edges together above fish and fold down in one-inch folds until paper is tight against fish. Fold ends in same way, keeping wrap tight. Seal edges with freezer tape. An over-wrap of heavy duty aluminum foil may be used or you can place film-wrapped fish in a freezer poly-bag. Exhaust all the air possible and seal. Lable, date and freeze.

When freezing steaks or fillets, put several thicknesses of film wrap between each piece as a separation paper. (Film is superior to waxed paper.)

Steaks	Six months

Thawing Fish

Place individual packages in refrigerator to thaw, allowing 24 hours for thawing one pound or package.

If quicker thawing is necessary, place individual, unwrapped packages under cold running water to thaw, allowing one to two hours for thawing one pound.

Do not thaw at room temperature or in warm water.

Do not refreeze thawed fish.

Fish to be stuffed should be thawed before stuffing. Fillets and steaks to be breaded should also be thawed beforehand.

Schedule thawing so that the fish will be cooked soon after it is thawed. Do not keep thawed fish longer than one day before cooking.

Frozen steaks and fillets may be cooked without thawing if additional cooking time is allowed.

MARKET FORMS OF FRESH & FROZEN FISH

Fresh and frozen fish are marketed in various forms or cuts. Knowing these forms and their special uses is important in buying fish. The following are the best known market forms:

Whole

Fish as they come from the water. Before cooking, the fish must be scaled and eviscerated — usually the head, tail, and fins are removed. The fish may then be cooked, filleted, or cut into steaks or chunks.

Dressed

Fish with scales and entrails removed, and usually the head, tail, and fins are removed. The fish may then be cooked, filleted, or cut into steaks or chunks. Pan-dressed: fish around 1 pound or less; usually are pan fried or broiled.

Fillets

Fillets are the sides of the fish cut lengthwise away from the backbone. They are ready to cook as purchased.

Steaks

Steaks are cross section slices from large dressed fish cut ⅝ to 1 inch thick. A cross section of the backbone is the only bone in a steak. They are ready to cook as purchased.

Single fillets

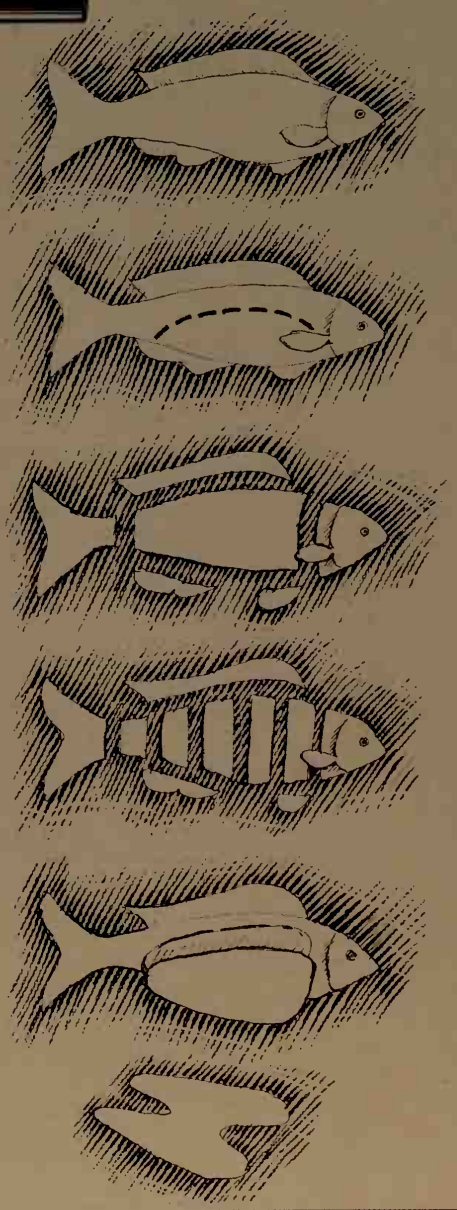
A fillet cut from each side of a fish is called a single fillet. This is the type most generally available on the market. The fillets may or may not be skinless and/or boneless.

Butterfly fillets

The two sides of the fish cut lengthwise away from the backbone and held together by the uncut flesh and skin of the belly.

Chunks

Chunks are cross sections of large dressed fish. A cross section of the backbone is the only bone in a chunk. They are ready to cook as purchased.



Baked Lobster Savannah

2 2-pound live lobsters
6 tablespoons butter or margarine
½ cup sliced fresh mushrooms
¼ cup diced green pepper
⅛ cup all-purpose flour
1 cup milk
⅛ cup sherry
1 teaspoon paprika
Salt, to taste
1 tablespoon diced pimiento
¼ cup fresh breadcrumbs (1 tablespoon per lobster)
¼ cup mild grated cheese (about 1 tablespoon per lobster)

Cook lobsters (see page 26).

To clean lobsters: Cut off lobster claws and legs, so only body remains. Hold lobster with its top side up. Using kitchen shears, cut an oval opening in the top of shell, from the base of the head to the tail. Remove all of the meat from the body and claws; cube meat.

Melt butter in 2-quart saucepan. Saute' mushrooms and green pepper in butter until tender. Blend in flour and add milk. Cook and stir until mixture comes to a boil and thickens. Add sherry, paprika and salt. Simmer 5 minutes; remove from heat. Add lobster meat and pimiento and mix well. Pile filling into the 2 lobster shells. Sprinkle with breadcrumbs gently, pushing crumbs into lobster mixture. Top with grated cheese.

Bake at 375°F. until cheese melts and mixture is bubbly, about 15 minutes.

Makes 2 large servings.

Fish

Species of fish that are most prevelant to Maryland are listed on the Nutritional Chart on page 38. Most fish landed in Maryland are sold fresh. Market forms of fish are illustrated on page 40.

How much fish to purchase: The amount of fish to buy per serving varies with the recipe to be used, the size of the serving and the amount of bone in the fish. Count about 3 ounces of cooked, boneless fish as a serving — a little less for small children and a little more for adolescent boys and men.

The following table can help you decide how much fish to buy per serving:

Whole — ¾ pound

Dressed or pan-dressed — ½ pound

Fillets or steaks — ⅓ pound

To buy fresh fish: Most varieties of fresh fish, like many other foods, are more abundant during certain seasons of the year. Your local fish dealer will give you information about seasonal offerings and indicate the varieties that are the most economical. The lesser known species of fish are often as satisfactory as the better known species and are usually more economical. Your dealer will prepare your fish in any market form you desire. Fresh fish has the following characteristics:

Flesh: Firm flesh, not separating from the bones, indicates fish are fresh and have been handled carefully.

Odor: Fresh and mild. A fish just taken from the water has practically no "fish" odor. The fishy odor becomes more pronounced with passage of time, but it should not be disagreeably strong when the fish are bought.

Eyes: Bright, clear and full. The eyes of fresh fish are bright and transparent; as the fish becomes stale, the eyes become cloudy and often turn pink. When fish are fresh, the eyes often protrude; but with increasing staleness, the eyes tend to become sunken.

Gills: Red and free from slime. The color gradually fades with age to a light pink, then gray and finally brownish or greenish.

Skin: Shiny, with color unfaded. When first taken from the water, most fish have an iridescent appearance. Each species has its characteristic markings and colors which fade and become less pronounced as the fish loses freshness.

Wrapping: If the fish is pre-wrapped, the wrapping should be of moisture-vapor-proof material. There should be little or no air space between the fish and the wrapping.

Fresh fish should be either used within 1 to 2 days or frozen for later use.

To freeze fish see section on Freezing Finfish page 45.

Species of fish may be readily substituted one for another, however, the market form, i.e. fillets, etc. should be kept the same.

One cup cooked fish weighs about 6 ounces. Two pounds of uncooked fish fillets will yield almost 4 cups cooked flaked fish.

Oysters

Although oysters in Maryland are generally referred to as "salt water" or "Bay", the species found in Maryland is the Eastern oyster (the same that is found from Maine to Florida). Flavor in oysters depends on the location from where they are harvested. Oysters taken from waters with high salt content are generally eaten raw on the half shell as they have the most distinctive flavor. Oysters that come from waters of low salt content are milder in flavor and are generally used in cooking.

Oysters are sold: live in the shell, fresh shucked, frozen shucked and frozen breaded.

Shell oysters: Oysters in the shell are generally sold by the dozen, half peck, peck and bushel. Oysters must be alive when purchased and used. When alive, the oyster shell will be tightly closed. Gaping shells, that do not close when handled, indicate that the oysters are dead and therefore no longer useable.

Shucked oysters: These are oysters that have been removed from the shell and are generally sold by the pint, quart, half gallon and gallon. Shucked oysters should be plump and have a natural creamy color. Oyster liquor should be clear and free from shell particles.

NOTE: The red coloration of the liquor of shucked oysters has been noted almost yearly during the oyster season. Normally, the color shows up within 24 to 48 hours after shucking. In some cases, the red pigment can be seen in the oyster meat. At times, the color will show up only after the oysters have been frozen. The depth of the color will vary from a pale pink to almost a blood red. At times, the liquor will produce other colors. Routine bacteriological examinations have proven that oyster's with coloration are perfectly safe to eat. Handling and cooking are the same as for clear oysters.

Oysters and frozen breaded oysters can be purchased in fish markets and in most supermarkets. If the supermarket does not have a fresh seafood counter, the oysters are usually kept on ice in a section of the meat counter or in the frozen food case. All Maryland oysters must be kept refrigerated or frozen.

To freeze oysters see section on Freezing Shellfish page 35.

Oysters are graded and sold in the following sizes:

Standards—About 30 to 40 to a pint
Selects—About 26 to 30 to a pint
Extra Selects—About 21 to 26 to a pint

Shelf-life of shell oysters if held on ice or in the refrigerator at about 35°F. is 2 to 3 weeks.

Shelf-life of shucked oysters is 7 to 10 days when kept under constant refrigeration.

Clams

Three species of clams are commercially harvested in Maryland: Hard Clams, Soft Clams and Surf Clams.

Hard clams in the shell are sold by the dozen in the following sizes:

Chowders: usually chopped and used in chowder and other cooked dishes.

Cherrystones: generally used whole in cooking or served raw on the half shell.

Littlenecks: mainly served raw on the half shell.

Hard clams are sold in pints and quarts in chowder and cherrystone sizes.

Both fresh hard clams in the shell and fresh and frozen shucked clams are sold in fish markets and in some supermarkets. If the supermarket does not have a fresh seafood counter, the clams are usually kept on ice in a section of the meat counter or in the frozen food case. All Maryland clams must be kept refrigerated or frozen.

Soft clams are sold live in the shell, canned in the shell, fresh shucked and frozen breaded.

Soft clams in the shell are sold by the dozen, half peck, peck and bushel. They must be alive when purchased and used. When alive, the clam shell will be tightly closed. Gaping shells, that do not close when handled, indicate that the clams are dead and therefore no longer useable. Occasionally frozen soft clams in the shell can be found in the frozen food case.

Shucked soft clams: Shelf-life of fresh shucked soft clams is only 3 to 5 days and as they cannot be frozen, shucked soft clams are only found in fish markets close to where clams are harvested.

Frozen breaded soft clams: Can be purchased in fish stores and in supermarkets in some areas.

Surf clams: The surf clam is primarily a commercial clam which is further processed into retail products: canned, minced or chopped; juice or broth in cans or bottles; frozen breaded.

Canned surf clams and broth are widely available in the canned fish section of most supermarkets.

Frozen breaded surf clams are sold as strip clams and can be found in fish markets and chain stores.

An 8 ounce can of chopped or minced clams yields approximately ½ cup each clam meat and broth.

To freeze clams see section on Freezing Shellfish page 35.

Scallops

Scallops, which have always been a delicacy, are a prospective new industry in Maryland. Scallops, like clams and oysters, are mollusks having two shells. Only the excellently flavored muscle, sometimes called the eye, which closes the shell, is eaten by Americans.

Sea scallops, the variety found in Maryland, sometimes have an eye reaching up to 2 inches in diameter. Fresh scallops are a light cream color, sometimes varying to a light pink. Scallops are available fresh shucked and frozen shucked.

Both fresh and frozen scallops, when thawed, should have a sweetish odor. When bought in packages they should be practically free of liquid. Scallops can be purchased in fish markets and the fresh seafood counter of some supermarkets.

Shelf-life of fresh shucked scallops is approximately 5 days when kept under constant refrigeration. Any scallop that has a greyish tint and/or has lost its firmness should be discarded.

One pound of fresh scallops yields approximately 2 cups cooked meat: One cup of fresh scallops weighs approximately 5 ounces.
